

The quality of the products and services you deliver to your customers depends on how good your process is.

Statistical Process Control is a proven and scientific way of determining the ability of your process to deliver Quality, and to track process stability over a period of time.

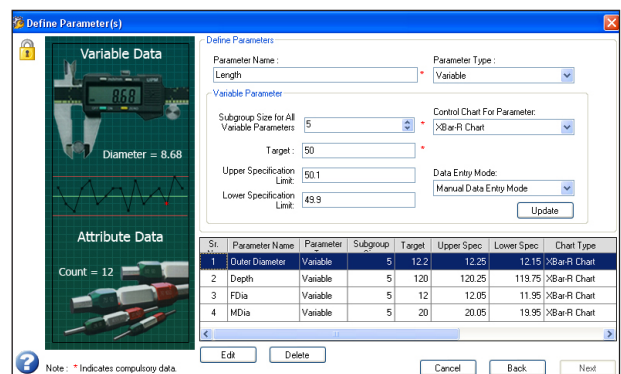

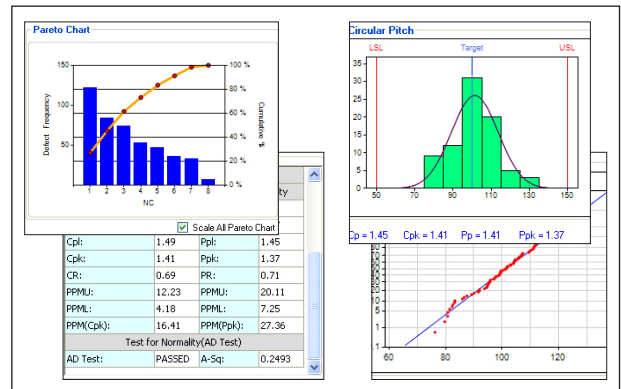

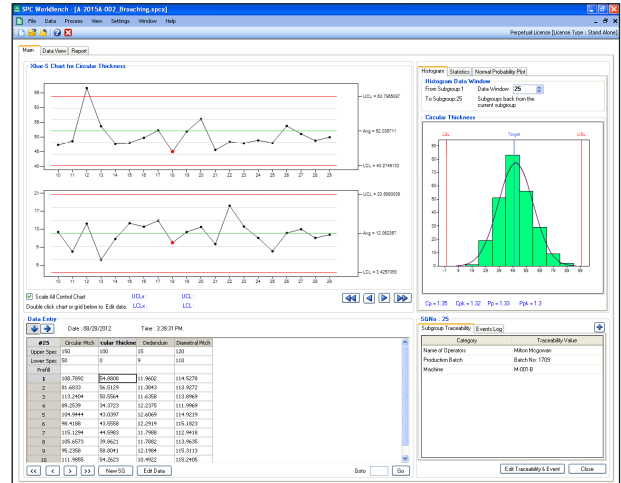

The SPC WorkBench software makes your SPC implementation simple without sacrificing on statistical rigor.

The SPC WorkBench software solution from Symphony Technologies puts together Control Charts, Histograms, Process Capability evaluation, and all that is necessary to put an intuitive and math-anxiety free SPC implementation, in your hands.

The charting, calculations and evaluation will be done by SPC WorkBench while you reap the benefits of delivering good quality products and services to your customer.

Comprehensive Features that help you

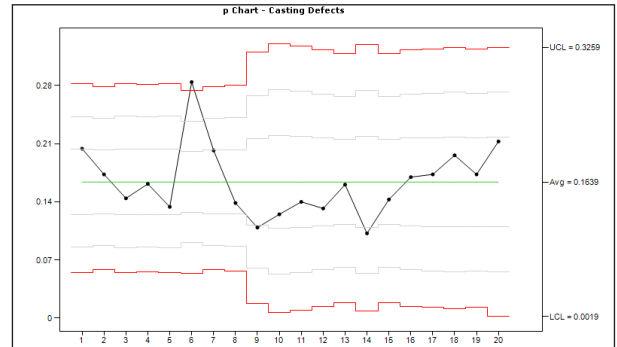

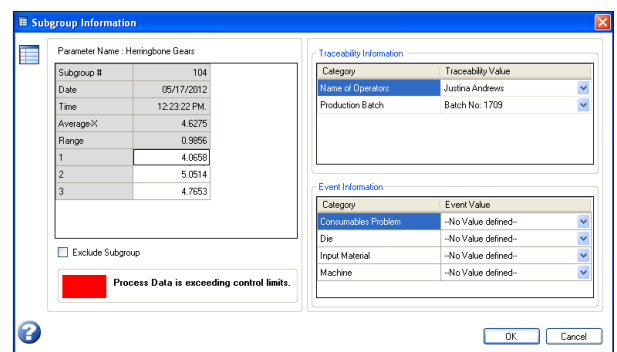

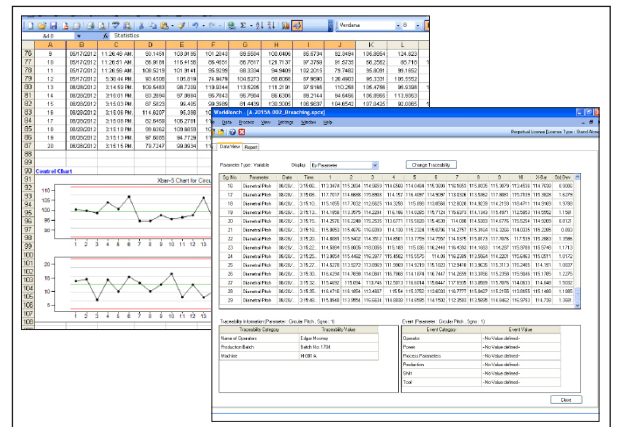

- Set up the process easily through a Process Set-up Wizard.
- Monitor Process Capability with **Histograms, Cp, Cpk, Pp and Ppk** indices.
 - Estimate PPM levels.
 - Verify normality of data through the AD test.
- Plot **X-bar R, X-Moving Range, X-bar s** charts for Variable data.
- Plot **p, np, c, and u** charts for Attribute data.
- Perform defect classification and Pareto Analysis for all Attribute parameters.
- Update Control Limits as required, and rationalize data by excluding outliers.
- Adjust processes based on signals of drift and out-of-control.
- Trigger email alerts to selected users on out-of-control and low capability situations.
- Attach Event information with data.

- Import data easily with simple copy and paste from MS Excel.
- Use powerful reports based on filters that you provide. Configure filters like machine, shift and lot.
- Save reports in several popular formats like PDF, MS Excel and MS World.
- Data entry from keyboard through a user-friendly spreadsheet like screen.
- Connect gages to the computer to capture the data directly.

Support

- Detailed help on using the software is installed with the software.
- Demo movies hosted on the SymphonyTech website guide you through the workflow of using SPC WorkBench effectively.
